Outpatient Bronchiolitis Clinic

Return visit information

Before returning to the

Outpatient Bronchiolitis Clinic

- Attempt to suction your baby’s nose with a bulb or nasal aspirator and saline drops.
- If, after suctioning at home, your baby is still having difficulty breathing, eating or sleeping, then bring your child to the suction clinic.

If you need to return to the clinic

- When you arrive, please enter at the Emergency Department entrance.
- Stop at the desk and let the nurse know you are here for the Bronchiolitis Clinic. The nurse will evaluate your child and check his/her oxygen level, before directing you to admissions.
- Admissions staff will verify your information and then notify the respiratory therapist that you are waiting.
- **Please do not feed your child while waiting for the respiratory therapist.**
- Please wait until the respiratory therapist can meet you and take you to the exam room to suction your baby.
- Wait times for the clinic depend on hospital emergencies and how many patients are waiting.

Precaution

PLEASE DO NOT FEED YOUR CHILD WHILE WAITING FOR THE RESPIRATORY THERAPIST.
 CHILDREN CANNOT BE SUCTIONED FOR AT LEAST 30 MINUTES AFTER THEY STOP EATING DUE TO INCREASED RISK OF VOMITING OR ASPIRATION.
